

## WINTER UPDATE: GLOBAL SCIENCE OF LEARNING EDUCATION NETWORK

As 2022 comes to a close, your Global Science of Learning Education Network (GSoLEN) is growing and preparing for an active 2023 connecting the world's education research to education systems across the globe.

### What to watch for!

#### Recruiting a Virtual Executive Director

The exciting news is that GSoLEN is growing and now requires a full time executive director to facilitate the many activities. The job description is posted on the GSoLEN website <https://gsolen.ucsd.edu/job-opportunities/>

### How you can help.

Please send suggestions about qualified candidates to [info@gsolen.org](mailto:info@gsolen.org) or send this to interested persons.

#### Knowledge Brokering Initiative Underway

Following extensive discussions among an advisory committee, GSoLEN is launching an initiative to define, promote, and accelerate the movement of research and science to educators and policymakers. Many organizations already serve as knowledge brokers that build bridges between science of learning research and classrooms. GSoLEN seeks to profile examples of best practices and encourage active growth of this important process.

Currently GSoLEN is recording video interviews with those involved in the various forms of knowledge brokering. These will be posted on the GSoLEN website, used in webinars, and be included in a practical report.

### How you can help.

If you are involved in any type of knowledge brokering and would like to be interviewed, please contact us at [info@Gsolen.org](mailto:info@Gsolen.org). Or please send any suggestions of effective knowledge brokering that GSoLEN should be aware of or contact.

#### Upcoming Webinars and Virtual Events

Look for an active schedule and Save the Date notices coming soon. Starting December 6, Professors Terry Sejnowski and Barbara Oakley, creators of one of the most popular Coursera courses about learning how to learn, will discuss *How to Hook Them! Bringing Education to Life with Insights from the Neuro-science of movie-making*.

Also, coming soon will be a virtual town meeting bringing together those interested in advancing knowledge brokering.

**More information coming!**

#### Another Step forward in Building Community Square Infrastructure

GSoLEN has been a partner with the AccelNet initiative to plan the technology infrastructure that can rapidly connect the science and education communities to disseminate important findings for practical implementation. Initial planning has been funded by the U. S. National Science Foundation. The AccelNet consortium has now submitted the next-stage proposal for advanced planning.

#### Why GSoLEN and How Can GSoLEN Serve You?

Like every organization, GSoLEN has been undertaking an active strategic review seeking to focus on how it can be most effective and meet. A PowerPoint presentation addresses many of these questions and can be found at <https://bit.ly/gsolen-overview>

Please take a look and send any observations. How can GSoLEN be most effective supporting you and your important work?
